Action for a Sustainable
and Clean Environment

Rising temperatures and humid conditions have created ideal breeding grounds for pests, leading to pest infestation and the spread of diseases, which pose serious public health risks.

The COVID-19 pandemic has clearly demonstrated the importance of sanitation in ensuring sustainable business operations. Governments worldwide are reinforcing public health systems and stepping up environmental services to reduce vulnerability to future pandemics. Businesses are also placing greater emphasis addressing waste generation and management to prevent pest breeding, and to protect against pathogen transmission.

Singapore has seen a significant increase in global environmental partnerships dedicated to developing effective and innovative ways to tackle these challenges. In this eDM, find out more about Public Hygiene and how businesses can offer integrated preventive measures and corrective solutions.

Pillar 3: Public Hygiene

Cleaning

Pest Management

Cleaning and Pest Management under the Public Hygiene pillar will focus on promoting sanitation practices and implementing protective measures to prevent disease transmission and public health hazards.

This includes incorporating integrated preventive and corrective controls to minimise harm to both people and the environment by:

- Implementing effective cleaning and disinfection measures to prevent the spread of pathogens and vector-borne illnesses.
- Adopting professional practices to ensure the proper use of chemicals and pesticides, avoiding environmental harm.
- Facilitating proper waste disposal and promoting environmental responsibility.
- Maintaining equipment properly to reduce contamination risks.

Exhibitor Profiles for Public Hygiene

Join us in making a difference by becoming an exhibitor at CESG 2024 if your business specialises in these fields:

- Equipment, solutions and services for cleaning, disinfection and sanitation
- Pest management equipment, solutions and services
- Personal protective equipment
- Software and analytics providers
- Artificial intelligence and robotics
